* During the first few months we did not keep track of the actual quart, gallon and 5-gallon containers collected. We initially based volumes collected on an average of 50 gallons of paint per drum. To more accurately measure of the actual volume of paint collected, we later adjusted the bills of lading to reflect the actual number of gallon, quart and 5-gallon containers collected, and an estimate of the actual amount of paint in each container.

** San Francisco does not track the container size - reported in gallons only.

Funded by a grant from the Department of Resources Recycling and Recovery (CalRecycle).
